Stuart's Top Tips

Our experts share their knowledge, experience, and their tips and tricks for getting the most out of Move.

Use the Save Current Camera Position tool, accessed from the Display toolbar, to store specific views in the program. This can be useful for creating figures where a consistent perspective and orientation is required. Multiple Camera Positions may be saved for a view, use in conjunction with the Navigator in Map and Section views to refer to stored positions relative to the whole section/map view.
